

Deepak Chitnis

Platform Engineering, Application Portfolio & Security Executive

Piscataway, NJ

Mobile: +1 732 609 3767, Email: dmchitnis@gmail.com

Summary of Experience and Qualifications

Highly accomplished IT Executive and Cloud Solution Architect with over 30 years of experience driving digital transformation, modernizing enterprise architectures, and leading multi-zonal engineering teams across major financial advisory, energy, and commercial sectors. A trusted strategic advisor expert at navigating high-stakes corporate initiatives, establishing robust organizational technical guardrails, and delivering highly secure, scalable, event-driven cloud platforms that bridge the gap between complex technical engineering and director-level business metrics

Primary skills: Program management, Agile (SAFe) delivery, Solution design, SDLC Process design, DevOps, Account Delivery Management.

Primary technologies:

Microsoft Azure Cloud technology stack comprising of Microsoft Azure (PaaS, IaaS), ASP.NET, WinForms, Sitecore, SQL Server, TFS/Azure DevOps.

AWS Cloud stack comprising of AWS DocumentDB, AWS Lambda, Python, AWS API Gateway, Kafka, AWS S3, AWS CodeBuild.

Cloud agnostic technologies including NodeJS, JavaScript, jQuery, Angular, HTML, CSS, XML, JSON, Microservices.

Projects Experience

Industry: Financial Services Sector: Advisory

Offering Portfolio: Core Business Operations Offering: Cloud Engineering

Competency Area: Technology

Program Lead: 15 months.

The client a major financial advisory company set out to enable Python development in the organization under an umbrella initiative 'Technical Language Office – Python'. This initiative would steer the organization towards a future where advanced data analytics, data science and AI would be center stage using Python and the vast number of packages that the Python platform would bring along with it. The adoption of Python increased from 300 to over 650 professionals within a period of a year. Along with it came standards, processes and a secure environment for development.

Role: In the capacity of program lead, Deepak led multiple groups to bring in standards, processes, DevSecOps and stood up a secure environment for Python development.

Technical Environment: Python, Jupyter, Docker, Jenkins, Kubernetes, Azure Kubernetes Service.

Industry: LSHC Sector: HealthCare

Offering Portfolio: Core Business Operations Offering: Cloud Engineering

Competency Area: Technology**Program Lead: 24 months.**

The client a major health care company set out to prioritize member experience on their primary web asset. There were various experiences that were identified for digital improvements. Appointments being a critical part, inclusive of pre appointment reminders, questionnaires, instructions, check-in proces, directions to the facility and all other experiences related to making the journey of the member as smooth and simple prior to and at the appointment.

Role: In the capacity of program lead, Deepak led 4 onshore/offshore teams to build out the above described experience. His responsibilities included providing technical guidance to the project teams (50 team members onshore/offshore), overseeing the decisions, implementing DevOps processes, mitigating risks and resolving technical issues. In short owning the whole delivery of the experience

Technical Environment: Adobe Experience Manager, Angular, NodeJS, Jenkins, Kubernetes, Azure Kubernetes Service.

Industry: LSHC Sector: HealthCare**Offering Portfolio: Core Business Operations Offering: Cloud Engineering****Competency Area: Technology****Technical Lead: 6 months.**

The client a major health insurance company needed to build a system for near realtime adjudication of claims. This involved large amounts of data that was sourced from mainframe system to be consumed in the UI and then processed through a series of rules in various data domains to arrive at an optimal adjudicated claim. This system was built on Amzon Web Services technologies. A Data as a Service (DaaS) platform was envisioned to provide the data from the mainframe on the cloud with near realtime updates.

Role: In the capacity of the cloud data architect and technical lead, Deepak led an onshore/offshore team to build the DaaS platform. His responsibilities included providing technical guidance to the project team (DaaS team peak 20 resources on Cloud technologies, in addition to 25+ professionals on the mainframe side of things), overseeing the architecture decisions, implementing DevOps processes, mitigating risks and resolving technical issues.

Technical Environment: AWS DocumentDB, AWS Lambda, Python, AWS API Gateway, Kafka, AWS S3, AWS CodeBuild.

Industry: Energy, Resources, and Industrials Sector: Oil, Gas, and Chemicals**Offering Portfolio: Core Business Operations Offering: Cloud Engineering****Competency Area: Technology****Technical Lead: 6 months.**

The client a major oil & gas company needed to build a system for optimizing the movement of commodities through their network. This involved large amounts of data that was sourced from various systems to be edited in the UI and then processed through an optimizing engine. This system was built ground up using Microsoft Azure technologies with many firsts for the company. The initial MVP of the system was delivered in about 3.5 months utilizing 3 teams using SAFe (Scaled Agile Framework). Among the firsts for the company was an implementation of Cosmos DB as transactional

data repository, Azure Data Lake as long term data repository, Databricks for the optimizer engine and the Scaled Agile Framework for building out the system in iterations.

Role: In the capacity of the technical lead, Deepak led an onshore team to build the system ground up. His responsibilities included providing technical guidance to the project team, overseeing the architecture decisions, implementing DevOps processes, mitigating risks and resolving technical issues.

Technical Environment: Angular 8, .NET Core 2.1, Cosmos DB, Azure Data Factory, Azure Data Lake, Logic App, Azure Databricks, Azure Service Bus, Git, Azure Pipelines, Power BI reports.

Industry: Energy, Resources, and Industrials Sector: Power and Water

Competency Area: Technology

Project Manager: 6 months.

The client a major utilities company needed to streamline the process of sending out notifications to customers, regional government officials, community boards and various public officials of work that would be performed in the area. The vision was to draw the impact area on a map which would then be used to fetch the list of impacted entities and send out the notification via email (using a vendor). The new system would integrate with existing systems and publicly available APIs to maintain the database of the entities.

Role: In the capacity of the project manager, Deepak led an onshore team, which also included client resources and stakeholders and an offshore team (combined team of about 32 professionals), to build the system ground up using agile (Scrum) framework.

Technical Environment: ASP.NET MVC, ASP.NET Web API, Azure WebJob, Bing Maps (Cloud API), Microsoft SQL Server, jQuery, JavaScript, HTML, CSS, JSON, XML, Bootstrap, TFS Build.

Industry: Energy, Resources, and Industrials Sector: Power and Water

Competency Area: Technology

Application Lead: 6 months.

The client a major utilities company needed to re-platform their customer facing portal on the Sitecore platform hosted in Amazon Cloud Services. Apart from the huge content management, campaign management benefits that the platform brought with it, there was deep integration with backend SAP system via a Microservices layer that needed to be architected, designed and built. Processes related to services such as Starting, Stopping and Moving, Payment processes and outage reporting were re-platformed to name a few. The project worth \$13M was delivered using an onshore/offshore model with approximately 80 resources (including client resources) at peak time.

Role: Deepak was responsible for all of the technical delivery of the system and lead a team of over 35 professionals to architect, design, build and stabilize the system. The technical team worked with a team of Business Analysts and a team of testers to successfully deliver the project on schedule and within budget.

Technical Environment: Relevant Technologies used comprised of Sitecore Experience Platform 8.1, NodeJS, Microservices, Amazon Web Services, TFS online, TFS Build, Octopus Deploy, ASP.NET MVC, Microsoft SQL Server, JQuery, JavaScript, HTML, CSS, JSON, XML, Bootstrap.

Industry: Government Sector: Civil Government

Competency Area: Strategy and Operations

Program Manager, 12 months.

The DMV needed to migrate the registration & titles systems (CIVLS) from a 3rd party vendor to in-house. This is a huge revenue generating system for the DMV (\$500M/year) and it was critical that risks were identified during the planning of the migration and mitigated during the execution of the migration. The code base transferred was tested effectively by the business to validate what was transferred was indeed the product executing in production. The planning and execution of this migration took a total of 6 months. This was achieved with ZERO business interruption. Following which it was required that we put a governance and an application life cycle management processes in place. This activity continued for a further 6 months in stabilizing the environments for the DMV staff to become self-reliant.

Role: In the capacity of a Program Manager, Deepak worked directly with the CIO on a day to day basis. Worked with the Commissioners at executive level to keep them apprised of the progress. Worked with the division chiefs to align them on cross division functions. Worked with the technical leads to build technical capabilities and worked with the vendors to successfully transition the system.

Technical Environment: Relevant Technologies used comprised of WinForms, TFS, TFS Build, Octopus Deploy, ASP.NET MVC, Microsoft SQL Server, JQuery, JavaScript, HTML, CSS, JSON, XML, Bootstrap.

Industry: LSHC Sector: Life Sciences

Competency Area: Technology

Delivery Lead, 6 months.

A major pharmaceutical company was looking to re-platform their public facing drug brand sites on the Sitecore CMS platform. This was not a true lift & shift, as the websites were to be upgraded with a new UX (look and feel) provided by a 3rd party. As part of the project new infrastructure needed to be stood up. A multi-team development environment based on cloud technologies was designed with completely automated DevOps processes utilizing TFS Online and Octopus Deploy, to promote code and content to QA, UAT and PROD environments. The lift and shift of 6 brand sites was completed in record time.

Role: As a delivery lead on the project, Deepak managed teams onsite and offshore (Phillipines), inclusive of the 3rd party resources to deliver the project in schedule and budget.

Technical Environment: Sitecore 8.1 XP, ASP.NET MVC, Microsoft SQL Server, JavaScript, jQuery, HTML, CSS, TFS Online, Octopus Deploy.

Industry: Financial Services Sector: Insurance

Competency Area: Technology

Program Manager, 6 months.

The client a multinational insurance company had a need for a private cloud solution to abstract out their line of business applications dependency on specific hardware platform. A global committee of client architects designed a private cloud architecture that would allow for hosting the applications and scale the platform as required. The \$30M project was to be delivered using an Agile framework in strict schedule and budget.

Role: Deepak was the delivery lead on the project to realize and implement the architecture design. He led a team of more than 30 professionals from varied disciplines

(network engineering, server administration, procurement and data center staff) to implement the design and rollout the pilot LOB application.

Technical Environment: Windows Azure Pack, Microsoft Team Foundation Server (TFS), SCVMM, Cisco Routers, Arista Switches, F5 security appliance, Nutanix, NetApp.

Industry: LSHC Sector: Life Sciences

Competency Area: Technology

Technology Delivery Lead, 6 months.

The client a multinational pharmaceutical company had various consumer facing websites procured through various vendors and acquisitions. This was leading to a fragmented marketing approach and in-consistent ways of retaining consumers. A new consolidated approach of building reusable components across websites based on the Sitecore platform was envisioned to solve the problem. This solution also included using email as a tool to establish a consumer engagement plan to augment the web presence. The estimate cost of the project implementation was over \$15M.

Role: Deepak was responsible for leading teams to establish DevOps processes, standup infrastructure in Azure with VPN connectivity to the on-premise network and the Email Campaign Management work stream

Technical Environment: Sitecore 8 XP, Microsoft Azure IaaS, ASP.NET (C#), TFS, SQL Server, MongoDB, Octopus Deploy.

Industry: Energy, Resources, and Industrials Sector: Oil, Gas and Chemicals

Competency Area: Technology

Delivery Lead, 9 months.

A major industrial gases company had acquired a software system to track their cylinders from a boutique development business. The system was ageing, not integrated in their systems and needed a major rebuild. The modern system would track cylinders using a barcode scanner, easy to use for field staff (offline capabilities), integrate with the internal ERP system (JD Edwards) and be scalable via configuration for new business units (multi-tenancy). The barcode scanning piece was built around an industrialized PDA device based on Microsoft .NET Compact Framework.

Role: As a delivery lead, Deepak managed an onshore and an offshore team (combined about 17 resources). Managed the standing up of the infrastructure (DEV/Test/UAT/Prod environments and development VDI infrastructure) in addition to delivering the software which was built ground up.

Technical Environment: ASP.NET, SQL Server, JavaScript, HTML, CSS, Microsoft .NET Compact Framework, SQL Server Integration Services.

Industry: Energy, LSHC Sector: Health Care

Competency Area: Technology

Enterprise Architect, 9 months.

A leading home health care provider was upgrading their old FoxPro based system to a modern Windows Smart Client Application employing n-tier architecture. The roll out of the new system nationally was in a phased manner in geographical regions spread over a time span of a year and a half. This presented a unique problem of keeping both the old and the new systems active simultaneously. The problem was magnified by the fact that

the systems depended on over 25 integration points with external 3rd party vendors and service providers.

Role: As an enterprise architect working closely with the CTO, Deepak worked with the client architects on each of the integration points to strategize, device and implement a remediation plan such that each of the integrations would route the data to the proper system based on geography and the rollout plan so as to ascertain that the rollout happened cohesively.

Technical Environment: Microsoft .NET Framework, Biztalk Server, SQL Server, SQL Server Integration Services.

Industry: Energy, LSHC Sector: Insurance

Competency Area: Technology

Team Lead, 6 months.

A large insurance company wanted to build their end to end agent recruitment system on the Microsoft Dynamics CRM platform. The leads were sourced from various public sites. As the leads progressed from being reached out to, through when the agent was actually hired by the company, all of the data was tracked in the CRM system. An additional requirement was to ensure the licensing of the agent for compliance purposes, which meant keeping track of their license expirations, exams and reimbursement. This was 1 work stream in a larger overall CRM implementation.

Role: Served as Team Lead for the end to end agent recruiting workstream. Led a team of 15 cross functional team members inclusive of client resources.

Technical Environment: Microsoft Dynamics CRM, ASP.NET WCF, Biztalk Server, SQL Server, SQL Server Integration Services.

Industry: Energy, LSHC Sector: Health Care

Competency Area: Technology

Integration Lead, 4 months.

A large cancer treatment center wanted to build a patient relationship management system based on the Microsoft Dynamics CRM platform. The system was to maintain history of each patient, inclusive of their doctor's appointments, travel needs, notes, related prescriptions, follow-up dates, procedures and expense reimbursements. The system was to integrate with quite a few external and internal systems.

Role: Served as Integration Lead. Integrated over 32 endpoints, with a mix of real time and batch processing.

Technical Environment: Microsoft Dynamics CRM, ASP.NET WCF, Windows Service, SQL Server Integration Services.

Industry: Energy, LSHC Sector: Life Sciences

Competency Area: Technology

Lead Architect, 4 months.

The client had inherited a Web Portal application as part of an acquisition. There was very little documentation surrounding the application. The current state of the application served one customer. The client was looking to scale the web portal to meet multiple customer requirements. After an initial assessment & discovery phase, a system was architected so as to provide a centralized self service tool to manage the various drug program focused internet facing portals. A service was designed to run within the client's

ESB (based on Mule) to make the configuration information available to each portal application. The portal application was re-architected to scale and serve multiple drug program from a single instance.

Role: Served as lead architect. In addition to architecting the solution, was responsible for scoping the solution and delivering an estimate against the scope to the client.

Technical Environment: ASP.NET 3.5, SQL Server 2005, IIS

PROFESSIONAL EXPERIENCE

Specialist Leader | AI & Engineering

Deloitte Consulting LLP | Jun 2019 – Dec 2025 | Morristown, NJ

Lead multi-million dollar client engagements with on-shore/offshore teams across various industry verticals.

Strategize and deliver AI-focused platforms and policy-driven digital transformation initiatives.

Group Manager / Solution Developer

Avanade | May 2011 – May 2019 | Piscataway, NJ

Served as Group Manager (ADSL) and Solution Developer, driving technical strategy and delivery over an 8-year tenure.

Senior Director / Senior Developer

Universal Music Group | Apr 2001 – Jan 2011 | New York, NY

Held 4 positions, including Senior Director of Technical Development and Architecture, spanning nearly 10 years.

Technical Consultant / Software Developer

Datajump & Various Entities | Feb 1990 – Mar 2001 | India, USA

Progressed through foundational roles including Technical Consultant at Datajump and various engineering/management positions at Software Research Group and Rivercode.

System Experience

Software / Products: Sitecore – project experience, Octopus Deploy – project experience.

Development Tools / Languages: Visual Studio Enterprise – expert, Visual Studio Code – expert, SQL Server Management Studio – expert. C# - expert, JavaScript – project experience, ASP.NET MVC – expert, ASP.NET Web API – expert, Transact-SQL – project experience, Azure Websites – expert, Azure Web Jobs – expert, Azure Functions

– project experience, Azure Queue – project experience, Azure DevOps – project experience

Hardware / Operating Systems: Windows 10 – expert, Windows Server 2016 – project experience, Ubuntu – training only, RHET Linux – training only.

Middleware / Databases: SQL Server – project experience

General Tools: Microsoft Excel – project experience, Microsoft Word – project experience, Microsoft Power Point – project experience, Microsoft Project – project experience, Microsoft Visio – project experience.

Education

Electronics & Telecommunication Engineering
Maratha Mandal's Polytechnic, Belgaum, India.

Professional Affiliations / Certifications

- Certificate in Management Excellence from American Management Association
- Certified CEP 7.0 Professional Developer from Sitecore.

Foreign Language Skills

- Marathi – Native
- Hindi – Proficient Socially
